

II. CLAIM AMENDMENTS

1. (Currently Amended) An apparatus for implementing a hands-free function, wherein the apparatus comprising comprises:

a mobile station comprising a first short-range radio transceiver for wireless short-range communication; and

a headset, separate from the mobile station, the headset comprising a second short-range radio transceiver for wireless short-range communication of files between the mobile station and the headset, and wherein

the apparatus further comprising is configured to transfer :

means for transferring an audio signal of a call between the mobile station and the headset for hands-free implementation of the call, and wherein the mobile station and the headset both comprises:

a short-range radio transceiver for wireless transfer of files between the mobile station and the headset, and

that the headset comprises:

a memory means for storing the files; and

a media player, wherein the media player in the headset which is arranged to decode a file which is the stored files in the headset.

2. (Original) An apparatus as claimed in claim 1, wherein the headset is arranged to:

receive a particular file from the mobile station with the short-range radio transceiver; and

store said file in the headset.

3. (Previously Presented) An apparatus as claimed in claim 1, wherein said files are user files.

4. (Currently Amended) An apparatus as claimed in claim 1, wherein the headset comprises as a memory means-one of the following: fixed memory, a memory card slot to which a memory card is detachably connectable.
5. (Original) An apparatus as claimed in claim 1, wherein the headset comprises a speaker and a microphone.
6. (Original) An apparatus as claimed in claim 1, wherein the headset comprises a user interface and that the mobile station is arranged to control the user interface of the headset over a short-range radio connection.
7. (Previously Presented) An apparatus as claimed in claim 1, wherein the media player comprises a multimedia player.
8. (Original) An apparatus as claimed in claim 7, wherein the headset comprises two earpieces and as a multimedia player an audio player, which is arranged to play music in the earpieces.
9. (Currently Amended) An apparatus as claimed in claim 8, wherein the audio player is arranged to play music by decoding a music file, which is stored in said memory means-in the headset.
10. (Original) An apparatus as claimed in claim 7, wherein the multimedia player comprises a number of functions, and that the mobile station is arranged to control said functions over a short-range radio connection.
11. (Original) An apparatus as claimed in claim 1, wherein the mobile station is one of the following: a mobile telephone, a mobile station of a cellular network.

12. (Original) An apparatus as claimed in claim 1, wherein said short-range radio connection is a Bluetooth connection.
13. (Currently Amended) A headset ~~comprising means~~ configured for transferring an audio signal of a call between the headset and a particular mobile station, wherein the headset is separate from the mobile station and comprises:
- a short-range radio transceiver for wireless short-range transfer of files between ~~said the~~ mobile station and the headset,
 - a memory ~~means~~ for storing the files, and
 - a media player which is arranged to decode a ~~the files which is stored in the~~ headset.
14. (Original) A headset as claimed in claim 13, wherein the headset comprises two earpieces interconnected with a headband.
15. (Currently Amended) A headset as claimed in claim 14, wherein said headband comprises an electronics module comprising said memory ~~means~~ and short-range radio transceiver.
16. (Previously Presented) A headset as claimed in claim 15, wherein said media player comprises a multimedia player.
17. (New) The headset as claimed in claim 13, wherein the headset comprises a server application configured for transferring a user interface of the headset to the mobile station.
18. (New) An apparatus as claimed in claim 1, wherein the headset comprises a server application and the mobile station comprises a client application, wherein the apparatus is configured to use the server application and the client application to transfer a user interface of the headset to the mobile station.
